

SECURING DATA IN MOTION

totemo provides user-friendly, pragmatic and technologically leading solutions to industry and government to meet the increasing demands to maintain privacy when exchanging sensitive information.

All online communication with partners and customers remains confidential, reliable and efficient – and most importantly, device- and location-independent.

Our patented and FIPS 140-2-validated security platform enables seamless and quick integration into any existing IT infrastructure.

We secure our customers' electronic communication since 2001. Globally operating companies as well as small and medium-sized enterprises from all industries rely on our solutions.

OUR SOLUTION PORTFOLIO

totemomail

Secure Email Communication with totemomail®

Email communication is particularly vulnerable to data loss. Whoever wants to intercept data traffic can do so without great effort. Hence it is important for companies to use a reliable secure messaging solution that protects sensitive information. The **totemomail®** product family is optimized for mobile devices and helps strictly observe security policies as well as monitor them comprehensively for internal and external audits.

totemomail® Encryption Gateway protects your email communication with customers and business partners whereas **totemomail®** Internal Encryption secures your internal email traffic. In combination, they become the innovative and potent hybrid encryption solution **totemomail®** Hybrid Encryption.

totemodata

Secure Managed File Transfer with totemodata®

Data is exchanged freely and totally unsecured in most company networks. That's because the FTP servers that are popular for exchanging large files do not meet current security standards. Moreover, there is a trend towards bigger and bigger email attachments, which is another non-secure way to exchange company data.

totemodata® is an easy-to-use solution that supports all types of secure file transfer such as human-to-human, human-to-system and system-to-system. It guarantees data confidentiality, integrity, as well as authenticity in any scenario for organisations across all industries. **totemodata®** is platform-independent, supports all established data exchange protocols and seamlessly integrates into any existing IT infrastructure. Its scalability makes it the ideal solution for companies and organisations of any size.

totemomobile

Secure Mobile Communication with totemomobile®

Nowadays, a large part of daily business activities and transactions is carried out on mobile devices. It is therefore all the more important that security is not overlooked. The **totemomobile®** product family makes sure companies do not need to sacrifice either security or ease-of-use when it comes to mobile communication.

Receive and share any sort of large file with colleagues via smartphone or tablet. Even encrypted messages can be read and answered easily and securely whilst on the go – no matter on which mobile device. Thus, companies protecting their mobile communication with **totemomobile®** are in an excellent position to support BYOD strategies.
